DETAILED ACTION

Specification

1. The specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 U.S.C. § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-30 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by U.S. Patent 5,760,716 to Milewski, hereafter Milewski.

For claim 1, Milewski provides a method of compressing electronic messages [e-mails] comprising the steps of identifying a data block; generating a pointer [personalized pointer message] based upon data in previous messages [e-mails]; and replacing the data block with the pointer [as described in the virtual mailbox section]. Claim 11 restates these method elements in apparatus format. For claim 21, Milewski provides a method comprising the steps of providing an e-mail interface and replacing data blocks with pointers.

For claims 2, 12, and 23, Milewski transmits data to a device [memory] for storage.

For claims 3, 13, and 24, Milewski decompresses e-mail by inserting data from a previous message [corresponding to the template].

For claims 4, 14, and 25, Milewski identifies previous e-mails based on subject fields.

Page 3

Serial Number: 09/902,060

Art Unit: 2819

For claims 5, 15, and 26, Milewski identifies reply e-mails with reply pointers.

For claims 6, 16, and 27, Milewski inherently uses various compression techniques.

For claims 7, 17, and 28, Milewski replaces common strings of characters with codes.

For claims 8, 18, and 29, Milewski defines one character string as an e-mail address domain, listing the addressee of the response message [field 412].

For claims 9, 19, and 30, Milewski inherently uses six bits of code per character outside the data block, as this is a standard coding technique for e-mail.

For claims 10, 20, and 22, Milewski compresses e-mail messages.

Response to Arguments

4. Applicant's arguments with respect to claims 1-30 have been considered but are moot in view of the new grounds of rejection.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent 5,553,281 to Brown et al discloses the use of pointers to view, modif, annotate, store, and distribute only specific segments of content. U.S. Patent 6,275,848 to Arnold inserts pointers into electronic messages, providing an automated reference.
- 6. Applicant's amendment necessitated new grounds of rejection. Accordingly, THIS ACTION IS MADE FINAL. See M.P.E.P. 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. 1.136(a). A shortened statutory period for response to this final action is set to expire THREE MONTHS from the date of this action. In the event a first response is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 C.F.R. 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for response expire later than SIX MONTHS from the date of this final action.
